

PDF Lite Viewer

User Guide

A free, lightweight PDF viewer for Windows.

No bloat - it opens PDFs and displays them well.

Welcome

PDF Lite Viewer is a free, lightweight PDF viewer for Windows.

It opens PDF documents and displays them well - and that is the whole idea.

No accounts, no bundled extras, no clutter. Just your document.

This guide is itself a PDF: everything you see here works on any document you open.

Opening documents

Open a PDF with Ctrl+O, drag a file onto the window, or double-click any .pdf file once the viewer is set as the default PDF app.

Large documents open instantly: pages are rendered lazily as you reach them.

Viewing modes

Three modes cover the ways people actually read:

Facing shows two pages side by side, like an open book.

Single shows one page at a time - ideal with full screen (F11).

Scroll runs the whole document as one continuous vertical strip.

Facing pages

Press 2 for facing mode. The cover stays alone, then pages pair up exactly the way a printed book lays them out.

Single page

Press 1 for single-page mode, and F11 for a distraction-free full screen.

Press Escape to leave full screen again.

Continuous scroll

Press 3 to scroll the document as one strip. Only the pages near the viewport are kept in memory, so even huge documents stay fast.

Chapter navigation

Press F4 to open the chapter sidebar. It shows the document's embedded outline as a tree - this guide's outline is on the left right now.

Click a chapter to jump to it. The current chapter stays highlighted as you read, and nested sections expand as you reach them.

Zoom and rotation

Zoom with Ctrl and + or -, or Ctrl and the mouse wheel.

Ctrl+0 fits the page to the window again.

Ctrl+R rotates the view 90 degrees clockwise - the file on disk is never changed.

Wide pages

Landscape pages, like this one, are handled naturally in every mode.

Printing

Press Ctrl+P for the print preview. Pick a printer, a page range, the number of copies, and black-and-white or draft mode.

The preview shows exactly how each page lands on the selected paper size.

Keyboard reference

Ctrl+O Open Ctrl+P Print F4 Chapters

1 / 2 / 3 View modes F11 Full screen

Arrows / PgUp / PgDn Turn pages Home / End First / last page

Ctrl + / - / 0 Zoom Ctrl+R Rotate

Languages

The interface ships in fourteen languages, including full right-to-left layout for Arabic. The viewer follows your Windows display language.

About and support

The About window (F1) shows the version, the MIT license, and links to Green Yoga Inc - the publisher - plus built-in web support.

Support opens only when you ask it to; PDF viewing itself never goes online.
